## 3. Market Developments in Second-Quarter 2024

### Equity Markets

The stock markets got off to a rough start in the second quarter of 2024, with the outlook dimming for Federal Reserve interest rate cuts against a backdrop of stubbornly high inflation. However, by the final days of the quarter, the outlook had brightened somewhat, as inflation news turned favorable enough that investors are more certain the Fed will be moving to lower rates in September. As a result, the performance of most stock markets was muted compared to the first quarter of 2024.

In the first two months of the second quarter, France's Euronext Paris CAC 40's performance was fairly stable but was affected during the lead-up to the French election – leading to them being the worst performing index with a decline of 8.85%. The Philippines' PSEI Index also fell 7.12%, with many blue-chip stocks falling to historically low levels, and the ratio of debt-to-total market cap increasing to around 63.2% - affecting investor confidence in the country. Thailand's SET also stood out as it fell 5.59%, underscoring the impact of illegal short selling, programmer trading and corporate scandals. Following the previous quarter's stellar performance, Japan's Nikkei 225 Average fell by 1.95% as overseas investors took their gains amidst a weak yen.

On a brighter note, Hong Kong's Hang Seng HSI delivered 7.12% in the second quarter, but Taiwan was the shining light of the pack, with the TSEC TAIEX posting gains of 13.49%, as they continue to ride on the back of the AI boom. Singapore's stock index remained fairly tepid, with no sharp fluctuations – delivering a gain of only 3.37%.

The Nasdaq Composite Index returned 8.26% for the quarter. Quarterly returns in the S&P 500 were positive but was lower compared to the first quarter with 3.92% registered. However, the Dow Jones Industrial Average recorded a loss of 1.73%.

#### Bond Markets

Bond markets recovered in the second quarter, boosted by improving inflation and a firmer, more confident outlook for rate cuts. Yields on the 10-year Treasury note have fallen more than 0.30 percentage points from their April peak, ending the quarter at 4.37%.

That drop in yields has meant investors have seen some price appreciation on their bond holdings. The Core Bond Index gained 0.17% for the quarter, roughly in line with the 0.18% return on US Treasury bonds. High-yield bonds saw larger gains of 1.07%, while longer-term yields lagged. With rate cuts on the horizon, strategists expect bonds to continue outperforming.

The yield curve remained inverted in the second quarter, with yields almost exactly in line with March at quarter-end, despite a bumpy few months in the bond market.

An inverted yield curve means short-term Treasuries yield more than their long-term counterparts. It's often taken as a sign that investors expect the economy to perform poorly in the months ahead. It's also generally a precursor to a recession, though not a guarantee. The yield curve has now been inverted for nearly seven consecutive quarters—an unusually long time.

## The Outlook

As we close off the second quarter of 2024, the first half performance of the S&P 500 soared nearly 15% in the first half of the year. The US economy remained strong, with inflation slowing down to a 2.6% annualised rate amid high levels of consumer spending and business investment. In Europe, a weak economy has enabled the European Central Bank to pull the trigger more quickly on rate cuts than the US Federal Reserve, which is expected to do so in September. Market drivers remained unchanged in Asia, with sentiment led by rate cuts in the US, geopolitics and more specifically, China's policies to lift its economy out of the doldrums.

Looking ahead, the greatest question of all is whether the global stock markets, especially the US can continue its upward trajectory. In the second quarter, despite having seven of 11 US sectors posting negative returns, the US market still gained owing to the outsized performance of technology stocks, such as Nvidia. While a rising tide can lift overvalued AI stocks even further into overvalued territory in the short term, long-term investors will be better off paring down positions in growth and core stocks, which are becoming overextended, and reinvesting those proceeds into value stocks, which trade at an attractive margin of safety. In Asia, attention should also be paid in examining whether Chinese equities have bottomed out, as there might be pockets of opportunity for those looking to take a long-term position.

Strong fundamentals continued to provide tailwinds for credit-sensitive assets—such as bank loans and high-yield bonds—in 2024's second quarter. But the US dollar strengthened because of stronger-than-anticipated US economic data, which weighed down global-bond returns during the quarter. And taking more interest-rate risk through US Treasuries or mortgage-backed securities in anticipation of rate cuts also didn't pay off during the quarter. The past year through June 2024 reminded investors about the difficulty of timing markets. Historically, after interest rates peak, bonds post strong returns for the next two years against a backdrop of falling yields. While it is still early, recent performance could be a sign of more positive returns in the months ahead if interest rates follow the market's expectations of lowering in the next year.

Moving into the third quarter, much of the broader geopolitical narrative remains unchanged. The US-China relationship is expected to come into sharper focus, with the topic weighing heavily in the US election, as well as the ongoing geopolitical crisis in the Middle East and Ukraine/Russia. Should the tariffs conversation come into play, some volatility is to be expected, but this will also bring new opportunities for the investor.

#### 4. Summary: Performance of CPFIS-Included Funds

**Exhibit 9** Average Return of CPFIS-Included Funds at End of 2Q 2024 (% in SGD)

	For the period ended Jun. 30, 2024 (% in SGD)			
Average Returns	3 months	1 Year	3 Years (Cumulative)	3 Years (Annualized)
All CPFIS-Included Funds	3.11	9.69	(2.26)	(1.22)
Unit Trusts Only	2.91	9.71	(1.07)	(1.06)
ILPs Only	3.24	9.68	(2.95)	(1.32)

Source: Morningstar Direct.

**Exhibit 10** Average Performance of CPFIS-Included Funds at End of 2Q 2024 (% in SGD)

Source: Morningstar Direct.

In the second quarter of 2024, the overall performance of CPFIS-included funds (unit trusts and ILPs combined) fell to 3.11%, when compared with last quarter's 4.88%. Proxied by MSCI World Index, global equities rose by 3.06%. MSCI AC Asia ex Japan delivered a stronger performance in the second quarter, reaching 7.65%, while bond returns – the FTSE WGBI declined slightly to deliver a negative return of 1.17% for investors.

Over the one-year period through June 2024, the CPF averaged 9.69% on a cumulative basis. The MSCI World Index returned 20.36%, with the FTSE WGBI reversing its fortunes in the second quarter to deliver a negative return of 0.49%. Within the three-year reporting window, the scheme posted a negative return of 2.26%, which lagged behind MSCI World Index's performance during the same time period, which delivered returns of 23.02%, with all other categories and funds tracked all posting negative returns.

**Exhibit 11** Average Performance of CPFIS-Included Funds at End of 2Q 2024 by Asset Class (% in SGD)

Source: Morningstar Direct.

The performance of all asset classes in the second quarter was mixed. While all asset classes finished with a gain, equity funds fell slightly to 4.10%, with allocation funds gaining only 2.48% compared to 4.28% in the last quarter. Money market was stable with 0.91%, with fixed income reversing its losses in the last quarter to post a marginal return of 0.03%.

Over the one-year horizon, all asset classes notched positive returns. Equity funds continued to lead the pack with a 11.91% positive return, while allocation and fixed-income funds reported average positive returns of 8.80% and 2.19%, respectively. Over the same period, money market funds maintained its growth rate, with an average positive return of 3.74%.

Over a three-year reporting interval, the performance of all asset classes remained fairly consistent. Money market funds continued to outperform the other asset classes with a positive return of 7.12%. Fixed income funds posted an average negative return of 6%. Allocation funds came next, with a negative return of 2.89%, followed by equity funds with a 1.32% loss over the three-year period.

**Exhibit 12** Average Performance of CPFIS-Included Unit Trusts at End of 2Q 2024 by Asset Class (% in SGD)

Source: Morningstar Direct.

By Morningstar Category, there was an overall drop in terms of the performance for most unit trusts. U.S. large-cap growth equity (5.23%) was replaced by India equity, which delivered returns of 10.31% in the second quarter as the top performing category. This was followed by Singapore equity, which increased its gains to 6.83% from 1.66% in the previous quarter. Asia ex-Japan equity rounded off the top three with gains of 6.55%. Having delivered gains of 11.85% in the first quarter, Japan large-cap equity posted a negative return of 2.53%. On another note, Thailand equity funds maintained its position as the worst performing category, with a negative return of 10.53%.

On a one-year timeframe, China- focused equity categories featured as some of the worst performing ones, although they managed to narrow their losses by around 50%. China equity A-shares experienced a 11.96% loss, followed closely by China equity with 11.57%. Thailand equity completed the top three worst performing categories with a negative return of 19.49%. On the other hand, the best performing categories were U.S. large-cap growth equity (31.92%), India equity (29.26%) and biotechnology equity (25.67%). Regarding fixed-income unit trusts, SGD and Asia bonds returned around 2.82% and 4.12% respectively.

In a three-year reporting window (cumulative basis), the top performing category saw U.S. large-cap blend equity lead with a return of 31.79%. This was followed by other equity with 28.49%, and India equity replacing U.S. large-cap value equity as the third best performer with returns of 28.12%. Mirroring the performance in the one-year window, China equity categories were among the worst performing categories, with China equity A-shares posting the largest loss at 52.15%, followed by China equity close behind with a negative return of 44.28%. Over the same period, all fixed-income groups struggled with a loss, with the "other" bond category suffering the most, with a negative cumulative return of 17.91%. Asia and SGD bond unit trusts reported losses of 0.56% and 2.00%, respectively.

**Exhibit 13** Average Performance of CPFIS-Included ILPs at end of 2Q 2024 by Asset Class (% in SGD)

Source: Morningstar Direct.

In the ILP space, gains narrowed across most categories when compared to the first quarter. In first place was India equity, which also extended its dominance from unit trusts to record gains of 14.60%. This was followed by “other” equity, which posted gains of 8.39%, with sector equity technology dropping 2 spots from first place in the last quarter with gains of 7.41%. China equity ILPs continued their path to recovery, with greater China equity registering a return of 6.62%, compared to 1.99% in the last quarter. China equity also saw a positive return of 3.04%, an increase from the negative return of 1.27% witnessed in the last quarter. Bonds also experienced improved performance in the second quarter, with global bond – EUR Biased reducing their loss to hit a negative return of 1.45%, and SGD bond reversing its fortunes to deliver a positive return of 0.69%. All allocation categories posted a positive return. Among the five subcategories, USD aggressive allocation performed the best, ending the three-month period with a gain of 3.32%, but this still represented a decline as last quarter’s figures were 8.84%.

Over twelve months, sector equity technology ILPs finally witnessed a decline for the first time in 2024, recording a positive return of 36.70%, when compared to the previous two quarters where gains hovered around the 45% mark. India equity improved on last quarter’s performance to take second place with gains of 29.77%, with global large-cap growth equity growing by 18.73%. Mirroring its performance over a three-month period, China-related ILPs narrowed their losses, with greater China equity finally delivering a positive return of 2.88% for the first time. All ILP bond funds recorded a positive return - with global bond in EUR the exception with a negative return of 1.78%. All allocation subcategories posted a positive return, with USD aggressive allocation placing first with a return of 16.29%.

For the three-year period, India equity dominated the list of best performing ILPs, with a positive return of 22.66%. China-related ILPs continued their streak as the worst performing ILPs, followed with Asia ex-Japan equity and global emerging markets equity following with 22.22% and 23.68% respectively. Global bond ILPs also did not fare very well either, although Asia bonds registered a return of 0.12%.

## 5. Summary of Performance

The Morningstar Rating is based on funds' risk-adjusted returns within its Morningstar Category peer group. Morningstar gives more weight to downside variation when calculating Morningstar Risk-Adjusted Return because investors are generally risk-averse and dislike downside variation. The Morningstar Rating is calculated within each Morningstar Category peer group because the relative star ratings of two funds should be affected more by manager skill than by market circumstances or events that lie beyond the fund managers' control. The Morningstar Rating is based on MRAR, using Morningstar Risk-Adjusted Return % Rank for funds in a category. Morningstar calculates ratings for the three-, five-, and 10-year periods, and then the overall Morningstar Rating is based on a weighted average of the available time-period ratings.

### Exhibit 16 The Weight of Overall Morningstar Rating

The overall Morningstar Rating weight is shown below:

Months of Total Returns	Overall (Weighted) Morningstar Rating
36-59	100% of three-year rating
60-119	60% of five-year rating 40% of three-year rating
120 or more	50% of 10-year rating 30% of five-year rating 20% of three-year rating

Source: Morningstar Direct.

There are certain cases where funds are *ineligible* for a Morningstar Rating. This includes funds that are:

- Categorized in any Other/Miscellaneous category;
- Restricted funds;
- Virtual share classes: Also known as a *convenience* or *currency* class, virtual classes are investments whose performance is quoted in another currency or allow investors to purchase shares in a currency other than its base currency;
- Inception date/performance start date is shorter than 36-month continuous monthly returns available;
- Dormancy history led to shorter than 36-month continuous monthly returns available;
- Obsolete funds;
- Funds whose peer group contains fewer than five distinct portfolios.

### Morningstar Rating ("Star Rating")

To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return is plotted on a bell curve: If the fund scores in the top 10% of its category, it receives 5 stars (Highest); if it falls in the next 22.5%, it receives 4 stars (Above Average); a place in the middle 35% earns 3 stars (Average); those lower still, in the next 22.5%, receive 2 stars (Below Average); and the bottom 10% get only 1 star (Lowest). The Overall Morningstar Rating is a weighted average of the available three-, five-, and 10-year ratings.

### Morningstar Return Rating

An annualized measure of a fund's excess return relative to the return of the 90-day Treasury bill over a three-, five-, or 10-year period. This is a component of the MRAR. Morningstar Return is displayed in decimal format and is calculated only for those investments with at least three years of performance history.

### **Morningstar Risk Rating**

An annualized measure of a fund's downside volatility over a three-, five-, or 10-year period. This is a component of the MRAR. Morningstar Risk is displayed in decimal format and is calculated only for those investments with at least three years of performance history. A high number indicates higher risk and low numbers indicate lower risk.

### **Morningstar Fee Level**

The Morningstar Fee Level evaluates a mutual fund share class' expense ratio relative to other funds that invest in a similar asset class and have similar distribution characteristics. Within each Comparison Group, a fund share class' expense ratio is ranked against its peers using five quintiles. Each quintile corresponds to one of the following scores:

- Low: Least Expensive quintile
- Below Average: Second Least Expensive quintile
- Average: Middle quintile
- Above Average: Second Most Expensive quintile
- High: Most Expensive quintile

### **Morningstar Sustainability Rating**

Morningstar assigns Sustainability Ratings by ranking all scored funds within a Morningstar Global Category by their Historical Sustainability Scores. The ranked funds are then divided into five groups, based on a normal distribution, and each receives a rating from High to Low. Although a higher rating is better than a lower one, please note that owing to the risk component of the scores, lower scores are better (and lead to higher ratings) than higher scores and indicate that a fund is, on average, invested in fewer companies with a high environmental, social, or governance risk under Sustainalytics' ESG Risk methodology and therefore exposed to less risk driven these aforementioned factors.

Percent Rank Rating Depiction

- Top 10%: High/5 globes
- Next 22.5%: Above Average/4 globes
- Next 35%: Average/3 globes
- Next 22.5%: Below Average/2 globes
- Bottom 10%: Low/1 globe

To receive a Portfolio Sustainability Score, at least 67% of a portfolio's assets under management must have a company ESG Risk Rating. The percentage of assets under management of the covered securities is rescaled to 100% before calculating the Portfolio Sustainability Score.

## 5.1 Morningstar Ratings for CPFIS-Included Unit Trusts

Full List of CIPFS Included UTs With Morningstar Data

Note: Funds need 36 months of performance history to have a Morningstar Rating, and certain categories are not eligible for rating. For a Sustainability Rating, at least 67% of the portfolio's AUM must have a company ESG Risk Rating.

### List A Funds

List A—Funds that have met all new admission criteria: i) The revised benchmark set at the top 25 percentile of funds in their global peer group; ii) The expense ratio is not higher than that set by the CPF Board by the respective risk class. The expense ratio criteria also applies to existing funds from Jan. 1, 2008, onward; iii) A 0% sales charge; iv) New funds applying for inclusion under CPFIS should preferably have a track record of good performance for at least three years.

## 6.1.2 Complete List of CPIFS-Included ILPs

### List A Funds

List A—Funds that have met all new admission criteria: i) The revised benchmark set at the top 25 percentile of funds in their global peer group; ii) The expense ratio is not higher than that set by the CPF Board by the respective risk class. The expense ratio criteria also applies to existing funds from Jan. 1, 2008, onward; iii) A 0% sales charge; iv) New funds applying for inclusion under CPFIS should preferably have a track record of good performance for at least three years.

## 8.1 Data Definitions

## Return

Expressed in percentage terms, Morningstar's calculation of total return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital gains distributions during that month, and dividing by the starting NAV. Reinvestments are made using the actual reinvestment NAV, and daily payoffs are reinvested monthly. Unless otherwise noted, Morningstar does not adjust total returns for sales charges (such as front-end loads, deferred loads, and redemption fees), preferring to give a clearer picture of a fund's performance. The total returns do account for management, administrative, and 12b-1 fees, and other costs taken out of fund assets. Total returns for periods longer than one year are expressed in terms of compounded average annual returns (also known as *geometric total returns*), affording a more meaningful picture of fund performance than nonannualized figures.

## Annualized Returns

For standard time periods (one, three, five, and 10 years), returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100)^{(1/y)} - 1) * 100$$

where,

Cum Ret = the cumulative return

$y$  = the number of years (one, three, five, or 10)

For customized time periods returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100) ^ {(365.25/d) - 1}) * 100$$

where,

Cum Ret = the cumulative return

d = the number of days between the start and end date

### **Annual Report Net Expense Ratio**

The percentage of fund assets used to pay for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's NAV. Sales charges are not included in the expense ratio. The expense ratio for fund of funds only includes the wrap or sponsor fees and does not include the underlying fund fees.

### **Standard Deviation**

A statistical measurement of dispersion about an average, which, for a mutual fund, depicts how widely the returns varied over a certain period. Investors use the standard deviation of historical performance to try to predict the range of returns that are most likely for a given fund. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility. Standard deviation is most appropriate for measuring risk if it is for a fund that is an investor's only holding. The figure cannot be combined for more than one fund because the standard deviation for a portfolio of multiple funds is a function of not only the individual standard deviations, but also of the degree of correlation among the funds' returns. If a fund's returns follow a normal distribution, then approximately 68% of the time they will fall within one standard deviation of the mean return for the fund and 95% of the time within two standard deviations. Morningstar computes standard deviation using the trailing monthly total returns for the appropriate period. All of the monthly standard deviations are then annualized.

### **Sharpe Ratio**

A risk-adjusted measure developed by Nobel laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance. The Sharpe ratio is calculated for the past 36-month period by dividing a fund's annualized excess returns by the standard deviation of a fund's annualized excess returns. Since this ratio uses standard deviation as its risk measure, it is most appropriately applied when analyzing a fund that is an investor's sole holding. The Sharpe ratio can be used to compare two funds directly on how much risk a fund had to bear to earn excess return over the risk-free rate.

The Sharpe ratio can be calculated one of three ways:

1. Standard Sharpe ratio ( $\text{SharpeRatio}_M$ )
2. Arithmetic Sharpe ratio ( $\text{SharpeRatio}_A$ )
3. Geometric Sharpe ratio ( $\text{SharpeRatio}_G$ )

$$\text{Sharpe Ratio}_M = \frac{\left( \frac{\sum_{i=1}^n R_i}{n} \right) - \left( \frac{\sum_{i=1}^n RF_i}{n} \right)}{\text{St Dev}_M}$$

$$\text{Sharpe Ratio}_A = \frac{\left[ \prod_{i=1}^n (1 + R_i) \right]^{\frac{m}{n}} - \left[ \prod_{i=1}^n (1 + RF_i) \right]^{\frac{m}{n}}}{\text{St Dev}_A}$$

$$\text{Sharpe Ratio}_G = \frac{\left[ \prod_{i=1}^n (1 + R_i) \right]^{\frac{m}{n}} / \left[ \prod_{i=1}^n (1 + RF_i) \right]^{\frac{m}{n}} - 1}{\text{St Dev}_A}$$

where,

$$\text{St Dev}_M = \sqrt{\frac{1}{n-1} \cdot \sum_{i=1}^n (R_i - \bar{R})^2}$$

$$\text{St Dev}_A = \text{St Dev}_M \cdot \sqrt{m}$$

and

$\text{St Dev}_A$  = Annualized Standard Deviation

$\text{St Dev}_M$  = Standard deviation

$R_i$  = Return of the investment in time period  $i$

$RF_i$  = Return of the risk-free investment in time period  $i$

$m$  = Number of time periods in a year

$n$  = Total number of time periods

$\bar{R}$  = Average return of the investment over the time period

### Information Ratio

Information ratio is a risk-adjusted performance measure. The information ratio is a special version of the Sharpe ratio in that the benchmark doesn't have to be the risk-free rate. The Israelson method is an adjustment of the information ratio to take into account the inconsistency of the IR when excess returns are negative.

$$Ratio_{\text{Israelsen}} = \frac{ER}{\text{Risk}^{\frac{ER}{\text{abs}(ER)}}} = \begin{cases} \frac{ER}{\text{Risk}} & \text{if } ER \geq 0 \\ ER \bullet \text{Risk} & \text{if } ER < 0 \end{cases}$$

### Max Gain

The peak-to-trough incline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak and the trough.

### Max Drawdown

The peak-to-trough decline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak and the trough.
